

ACTIVITY

STOP THE FRAME!!!

Hi guys!

Here the link of the video I told you for our activity:

<http://www.youtube.com/watch?feature=endscreen&v=mvxw1TynuTk&NR=1>.

Remember what to do:

1. Watch the video more than once to understand as much as you can;
2. Choose the frame you like best;
3. Copy it and paste it on a Word page;
4. Write down a little description of the frame;
5. Send frames + descriptions to me

Understood? I hope so!!!

CU!!!

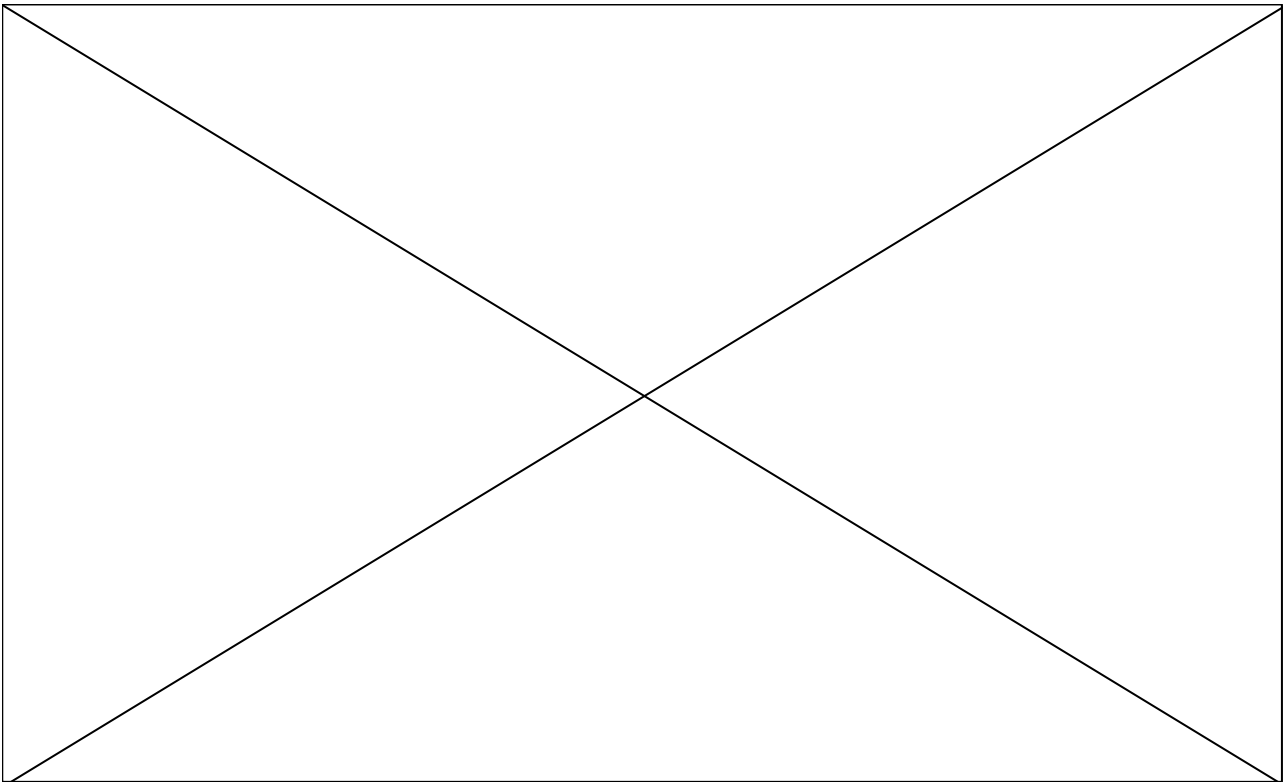

FIORELLA CAPUTO

In this picture there is a women sitting on an armchair who is reading the first comic book of the history. She is wearing a pair of pants with a top and a shirt over, and she is wearing low-heeled shoes. Probably, this comic tells of the adventures of various characters that make her laugh. I think that she likes reading comics as a hobby but it is also a means of communication that the author uses to communicate with those who buy it, expressing their moods with funny scenes and words.

MONICA CESARIO

If when you want to know the story of a country, the life of an artist or you need information in general you can go there and you just have to open a book and start reading, you have to say thank you to the Greeks that start the first library in 510 BC. Now all we have a computer and I know that with internet it's easier and more convenient to look for something but I think that studying in a library it's very beautiful. You can sit on a comfortable chair and you have your own table with a lamp. The atmosphere is reserved and relaxed. You can stroke and sniff the pages. You are in an amazing and fantastic world.

CESARIO SAMUELE

In this frame the video describes the appearance of newspapers in Europe.

The newspaper was an important revolution because everyone in the world could know a lot of news of other countries.

In Europe newspapers appear in 1450 but the first English language newspaper was published in 1620.

ANNAROSA FERRARO

In the past many people together led to the birth of language, they had to communicate with each other. The Sumerians were the first to invent writing, first with cuneiform texts then passed to logograms. Writing, means of communication, was born above all for economic reasons.

LINA GIUDICE

In the great plains Indians often communicated by means other than the words. These signals were sent in many ways: by horse, blankets, mirrors, smoke and fire arrows at night. Indians, in a few time, kindled a fire in dry wood, then they threw on it grass or green branches. After, they covered it with a blanket that was waved at regular times, thus creating "clouds" of smoke transmitting simple messages, one hundred and more miles away, with almost the same speed "wireless speakers" of white men.

LORENZA IMPROTA

In this picture I can see a big explosion on the desktop. This explosion symbolizes the birth of internet sites. In fact in the picture I can see the ebay logo, ask logo and internet explorer logo. I pick out this moment of the video because I have perceived the real sensation of this instant happened on internet. If we want to understand this evolution we can think of all the things that we can find on the web.

MARIOPIO LETTIERI

In the past men lived in caves. On the walls they drew symbols that have come to us. Scholars have studied the meaning of these symbols since ever. They are ancient communications that the men used. They wrote on the walls with stones and these symbols were coloured with the sand and coal (after the discovery of the fire).

FRANCESCO MASSIMINO

These computers were first sold commercially. They were used as database by the banks which were not connected with the whole world. Only few knew them because they weren't very popular.

NOEMI MINARDI

- 1) The first newspapers appear in Europe in 1450 in countries where many people were illiterate;
- 2) The ecclesiastics printed newspapers because they managed schools;
- 3) In 1700 newspapers treated many topics: natural sciences, chemistry, biology, medicine, fashion, etc.;
- 4) There were many newspapers in England because there was more freedom of opinion;
- 5) A famous newspaper in this period was "Il Caffé" printed in Milan;
- 6) In 1789 printing became free and many newspapers were printed at sunlight;
- 7) The newspapers were purchased by subscription or in circles and workshops;
- 8) In a year the newspapers became very important.

ELVIRA NICOLETTI

In this photo different social networks are depicted. To humans, Internet has been the most important invention to communicate. They always tried to find a way to communicate. Slowly, after the drawings in caves, they found other means: phone, papers and newspapers. Internet is very important because, through these social networks like facebook and twitter, you can communicate and keep in touch with your friends.

ASSUNTA PORCO

the evolution of communication

In this frame they talk about twitter and its 10 billionth tweet. Twitter is a micro blog and you can write your thoughts, your ideas, your feelings in just 140 characters.

The name "Twitter" is derived from the English verb "to tweet" which means "chirp".

Twitter is one of the most popular sites, together with Facebook and Youtube.

At first it was only in English but also in time, twitter has expanded.

Twitter isn't just a micro blog: it is also a site where you can follow the action in real time of your favorite singers, actresses or celebrities.

Twitter is a very used site by teenagers who want to share their ideas with other people. I often use it, too, but only to follow the actions of my idols!

SILVIA SCARPELLI

In this frame there is Wikipedia. Wikipedia is an online encyclopedia free content written collaboratively by volunteers. There are currently active versions in 195 languages, of which the most developed is English.

Its goal is to collect data, information and experiences, creating and distributing to the public a free encyclopedia, which is free and always richer in content.

Wikipedia is one of the most visited sites in the world, it is the sixth in the standings with millions of visitors per month.

The primary characteristic of Wikipedia is that it makes it possible for anyone to collaborate, using a system of editing and publishing open.

I often use Wikipedia for school research, or personal information because it's a very reliable site.
