

System that Communicates Egg Flow at Conveyors	DP1.1.1.1.1: Will have a radio button for sample size.
	DP1.1.1.1.2: Will have a radio button for sample variance
	DP1.1.1.1.3: Will have a radio button for alarm snooze length.
	DP1.1.1.1.4: Will have a radio button to access the sound file dialogue.
	DP1.1.1.1.5: Will have a slider for volume control.
	DP1.1.1.2.1: Will have a radio button for altering the number of sensor arrays.
	DP1.1.1.2.2: Will have a radio button for altering the number of sensors per array.
	DP1.1.1.3.1: Will have a radio button for altering the serial port number.
	DP1.1.1.3.2: Will have a radio button for altering the timeout length.
	DP1.1.2: Will indicate which sensor(s) and/or array(s) are jammed by color change.
	DP1.1.3: Will generate alert sound using computer speakers.
	DP1.1.4.1: Will label each sensor array with its address.
	DP1.1.4.2: Will label each sensor with its egg count.
	DP1.1.4.3: Will label each sensor array with its total egg count.
	DP1.1.4.4: Will indicate the total egg count.
	DP1.1.4.5: Will make each sensor display element clickable to allow changing of status.
	DP1.1.5: Might display past log files in child window.
	DP1.1.6.1: Will indicate the status of each sensor via color change.
	DP1.1.6.2: Will indicate the status of each sensor array via color change.
	DP1.1.6.3: Will allow a sensor array to be disabled by clicking its display element.
	DP1.1.6.4: Will have a toggle for disabling the audio alarm.
	DP1.1.7: Will have a log tab updated as status changes are made.

DP1.1.8: Will have a button to disable configuration changes.

a System that Communicates Egg Flow at Conveyors

DPO: Build a	DP1.1.0: Will have a button to disable configuration changes.
	DP1.1.9: Will have a dialogue window to confirm reenabling changes.
	DP1.1.10: Will have a close window button.
	DP1.1.11: Will have a resizable window and display elements.
	DP1.1.12: Will have a Minimize button.
	DP1.1.13: Will have a Maximize button.
	DP1.2: Will make display and interaction elements suitable for touch interaction.
	DP2.1.1.1: Will have a Bridge-to-Communication Driver.
	DP2.1.1.2: Will have a control structure implemented to poll modules.
	DP2.1.1.3: Will have a control structure implemented as a state machine for detection.
	DP2.1.1.4: Will incorporate a module or methods to update GUI components.
DP2.1.2:	Will incorporate a C/C++ driver or comm library to drive communication.
	DP2.1.3: Will be RS-232 capable.
	DP2.1.4: Will convert communication signal between RS-232 and RS-485.
	DP2.1.5: Might use Hamming Code for error correction.
	DP2.2.1: Will convert from RS-485 back to RS-232 using a hardware converter.
	DP2.2.2: Might utilize UART to buffer signals.
	DP2.2.3: Will use hardware-implemented communication software.
	DP2.2.4: Will incorporate a PBASIC Control Structure to count eggs from hardware.
	DP3.1.1: Will incorporate component to write log files.
	DP3.1.2: Will incorporate component to read log files.
DP3.1.3:	Will incorporate component to write configuration file.
	DP3.1.4: Will incorporate component to read configuration file.
	DP4.1.1: Will record configuration changes in a Configuration .ini file.
	DP4.1.2: Will store system status changes in a log text file.
	DP4.1.3: Will record state values in a configuration .ini file.
DP4.1.4:	Might maintain egg counts in a count file.
	DP4.1.5: Might maintain egg counts in a count file.
	DP4.1.6: Might incorporate a HTML Post module to store status changes in a MySQL.
	DP4.1.7: Might incorporate a HTML Post module to store egg counts in a MYSQL.
	DP4.2.1: Will incorporate PBASIC object to store address.
DP4.2.2:	Will incorporate PBASIC objects to remember state.
	DP4.2.3: Will incorporate PBASIC object to store egg counts.
